MESSAGE

Spectrum is a key socioeconomic resource for the larger public good, with power to multiply opportunities under Digital India, while enhancing quality of life of citizens. The National Frequency Allocation Plan 2018 (NFAP-18) is accordingly envisaged as a tool of innovation, R&D and investment in the country enabling the Indian communications industry to develop and harness new technologies for all-round development.

High-speed-high-quality broadband services to the public is the vision of the National Digital Communications Policy 2018 (NDCP-18), and spectrum is an important resource to achieve this objective. I believe that the NFAP-18 presents a pioneering roadmap for Indian digital communications industry. India has been awaiting more spectrum in unlicensed bands since 2007 to provide world-class, cost-effective Wi-Fi services. The NFAP-18 unveils a quantum of 605 MHz license-exempt spectrum in 5GHz band for Wireless Access Services and Radio Local Area Networks in outdoor, to meet the ever-growing appetite for data. This is a fundamental step to realize the envisaged National Broadband Mission under NDCP-18 to establish millions of Wi-Fi hotspots in urban and rural areas, which have the power to transform our economy and society.

The NFAP-18 aims to enhance the landscape of innovation in wireless technologies by offering over 30 license-exempt bands for Short Range Devices (SRDs) and Ultra-Wideband Devices (UWDs) creating a plethora of opportunities for the public to enjoy benefits from technologies, and enabling the industry to build a robust domestic manufacturing ecosystem.

The Technology landscape in the radiocommunications sector is fast changing; spectrum allocation and assignments have to be equally dynamic and responsive. The NFAP-18 signals India's efforts to adopt 5G services in line with global developments.

I am confident that the NFAP-18 – brought out by The Department of Telecommunications after wide-ranging consultation with Government departments, telecom service providers, manufacturing industry, academia and other stakeholders – will enable us to achieve the objectives envisaged in the NDCP-18 and lead to large-scale job creation in the country.

Yours sincerely,

FOREWORD

National Digital Communications Policy, 2018 (NDCP-18) recognizes Spectrum as a critical natural resource and enabler to achieve India's key socio-economic goals of inclusive growth and development. The National Frequency Allocation Plan 2018 (NFAP-18) accordingly aims to provide a roadmap for the availability and allocation of wireless spectrum to facilitate the development and deployment of next generation wireless services in the country.

As India becomes increasingly digital with over a billion wireless mobile connections in the country, ensuring the availability of adequate spectrum becomes a critical pre-requisite, not only for growth of broadband and data services, but also for the delivery next generation of services to citizens and industry.

The NFAP-18 is notable for several firsts, which are expected to drive the sustained growth of wireless services in India in the years to come. A few of the most notable contributions are – first, a massive expansion in the quantum of License Exempt Spectrum from 50 MHz to 605 MHz for wireless access services to promote high speed broadband through Wi Fi, second, a formal recognition of Short-range Devices (SRDs) and Ultra-Wideband Devices (UWDs) through the allocation of license exempted spectrum in several bands for such devices and three, enhancing the transparency in terms of providing consolidated and comprehensive information on all International Mobile Telecommunications (IMT) bands.

It is our belief that pursuant to the NFAP-18, new wireless services will see rapid development and adoption thus accelerating the Digital India and Make in India missions of the Government. It is also expected that the NFAP-18 would provide a strong fillip for the growth and development of Machine-to-Machine (M2M) communications and Internet of Things (IOT), which will be supported in a large measure by the forthcoming 5G technologies.

The Wireless Planning and Coordination and Policy Wings have played a key role drafting a progressive and forward looking future. Large scale availability of world class telecom services and products is crucially dependent upon the availability of spectrum in the right bands and in the right quantities.

The NFAP-18 strategically signals the government's priorities w.r.t. adopting 5G services in India in line with the rest of the world and appropriately identifies bands to facilitate the rollout of dense backhaul networks to make the network 5G ready.

Importantly, expanding its horizon, the NFAP-18 aims to provide the requisite foundation for encouraging domestic R&D and innovation in wireless technologies in the country to fulfil the objectives of the NDCP; leading to enhanced quality of life and opportunities to our citizens.

The NFAP-18 would not have been possible in its present form without the wholehearted support of industry, academia and the various Government departments/bodies. The Radiocommunications Bureau of the ITU deserves a special thanks for readily agreeing to incorporate certain texts from the Radio Regulations into NFAP-18.

National Frequency Allocation Plan 2018: An Overview

Section A — Introduction

1.1 The *National Frequency Allocation Plan-2018* of India provides a broad regulatory framework, identifying which frequency bands are available for cellular mobile service, Wi-fi, sound and television broadcasting, radionavigation for aircrafts and ships, defence and security communications, disaster relief and emergency communications, satellite communications and satellite-broadcasting, and amateur service, to name just a few.

1.2 The Radio Regulations, an international treaty signed by India and other Member States of the International Telecommunication Union (ITU), governs the use of radio-frequency spectrum and satellite-orbits (geostationary and non-geostationary) at the global level. Accordingly, the *Radio Regulations* (Edition of 2016) is the foundational text used for drawing up the National Frequency Allocation Plan 2018 (NFAP-18).

1.3 The central theme of NFAP-18 is the allocation of radio-frequency spectrum to different radiocommunication services as detailed in the column named “India” in the Table of Frequency Allocations in Section B of Chapter 3. NFAP-18 covers the frequency range up to 3000 GHz.

1.4 NFAP-18, though governing the use of spectrum in India, does not by itself provide the right to use the spectrum. Before any part of the spectrum is put to use in India, a licence is required to be obtained from the Wireless Planning and Coordination Wing (WPC Wing), Ministry of Communications, unless such a requirement is exempted by the WPC Wing.

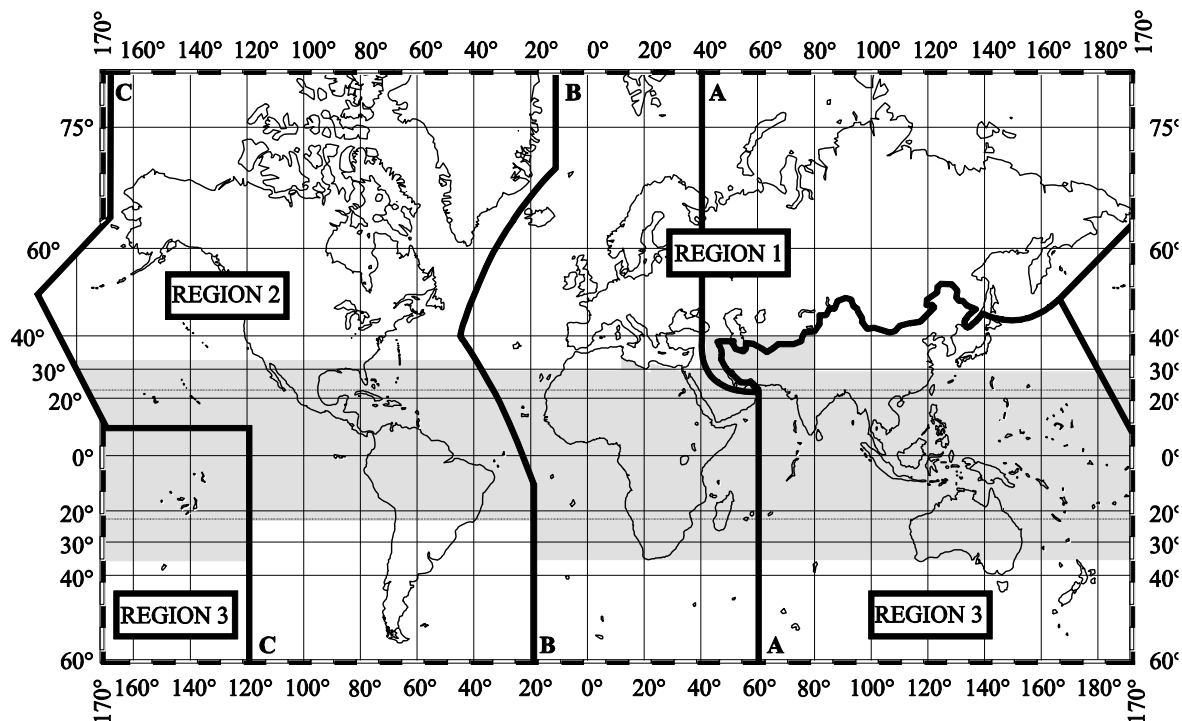

1.5 With a view to providing a stable, yet flexible, regulatory framework, NFAP-18 doesn't attempt to list the various applications (uses) of the individual radiocommunication services that are currently authorised or may be authorised in future in India. WPC Wing may, having consulted as it considers appropriate, provide for new applications of individual radiocommunication services while ensuring conformity with the provisions of the Radio Regulations.

Section B — Frequency Allocations and NFAP-18

1.6 In order that all radiocommunication services — forty one in total (the 41st being *special service*) — have effective access to frequencies, the spectrum is divided into frequency bands and each band is allocated to one or more radiocommunication services. The principle of designating a band for the use by specified radiocommunication services is referred to as *frequency allocation*.

1.7 For the purpose of frequency allocation, the world has been divided into three Regions. They are referred to as Region 1, Region 2 and Region 3 in the Radio Regulations. The three Regions are as shown in the map* below. India is within Region 3. It should be noted that where the words “regions”

or “regional” are without a capital “R” in this document, they do not relate to the three Regions defined for purposes of frequency allocation.

5-01

Regions in the Radio Regulations

1.8 Where a frequency band is allocated to more than one radiocommunication service, each service using the band is categorised either as a “primary” service or a “secondary” service. A station in a secondary service can’t cause harmful interference to stations of primary services, nor can it claim protection from harmful interference originating from stations of primary services, irrespective of the date the stations in the primary services begin operating.

1.9 Any entity (public and private bodies, as also individuals), intending to use the spectrum in India, can determine from the Frequency Allocation Table in Section B of Chapter 3 which frequency bands are available for the radiocommunication services of its interest.

1.10 A radiocommunication service usually encompasses more than one application. For example, cellular mobile service (2G, 3G, 4G and to be introduced, 5G.), Wi-Fi, radio trunking, radio paging, walkie-talkies and several others come under the “mobile” service. As another example, broadcasting

includes sound broadcasting as well as television broadcasting. As the use of the spectrum is not static, and that the introduction of ever new application of spectrum is determined by demands from citizens and the industry, NFAP-18 doesn't list the various applications of any radiocommunication service. In a few cases, however, applications of a radiocommunication service in specific frequency bands have been indicated in the India footnote to the Table of Frequency Allocation in Section B of Chapter 3.

1.11 Frequency allocation is the first step towards ensuring efficient, rational, and interference-free use of the radio-frequency spectrum and satellite-orbits (geostationary and non-geostationary) — the natural, limited resources. The conditions (technical, procedural and regulatory) for using the radio-frequency spectrum and satellite-orbits come under the licensing-regime. Accordingly, NFAP-18 doesn't address the licensing aspects of the use of the spectrum-orbital resources.

1.12 The IMT 2020 or 5G services with its enhanced capabilities has relevance cutting across industry verticals. To take advantage of 5G services for Digital India, the millimetre bands viz. 24.25, 27.5, 31.8, 37 GHz and bands below 6 GHz are under active consideration for 5G services subject to co-existence studies and global deliberations.

1.13 Short-range Devices (SRDs) and devices using Ultra-wideband (UWB) technology make use of the radio-frequency spectrum. SRDs and UWB-devices are fast assuming crucial importance to citizens as well as specialized public and private sectors (e.g., medical implants, ground-probing radars, the latter for use by security and utility agencies). Machine-to-Machine (M2M) communications and Internet of Things (IoT) largely depend upon SRDs and UWB-devices. These devices are, however, not considered as providing radiocommunication services and are usually kept out of the purview Radio Regulations. For ready reference, Annex-1 presents the list of applications which have been declared 'license-exempt' by the WPC Wing. Annex-2 lists the commonly used frequencies for specific uses. Additional 1 MHz spectrum from 867-868 MHz for M2M services and other similar applications is under consideration for license exception

1.14 The terms such as *allocation, assignment, radio astronomy, safety service* which appear in the Frequency Allocation Table and the associated footnotes have specific definitions in the Radio Regulations. These terms are defined in "Chapter 2: Terms and Definitions."

1.15 Frequency Allocation Table is complemented with its footnotes. The Radio Regulations qualify the frequency allocations made to the three Regions with the footnotes. These footnotes, usually known as International Footnotes, are reproduced in Section C of Chapter 3. India specific footnotes, identified by the prefix "IND" and followed by a number, appear only in column 4 of the Table of Frequency Allocations in Section B of Chapter 3. These footnotes qualify the use of the frequency band(s) in India and are shown in Section D of Chapter 3.

1.16 The effective date of NFAP-2018 is **25.10.2018**.

Chapter 3

Frequency Allocation

Section A — Interpretation of the Frequency Allocation Table

3.1 The basis of the frequency allocations in India is the Table of Frequency Allocations in Section IV of Article 5 of the Radio Regulations. The frequency allocations made to the three Regions in the Radio Regulations are reproduced in Columns 1 to 3, named Region 1, Region 2 and Region 3, respectively, in the Table of Frequency Allocations. The frequency allocations in India is listed in Column 4 —India — of the Table of Frequency Allocations.

3.2 Each box in the Table of Frequency Allocations refers to allocation of a frequency band to one or more radiocommunication services. The frequency band is indicated in the left-hand top corner of that box.

3.3 A frequency allocation to a service is categorised as a primary or a secondary allocation. In a box, a service which is shown in “capitals” (example: FIXED) is a primary service for that allocation. A service the name of which is printed in “normal characters” (example: Mobile) is a secondary service. Additional remarks, qualifying a service in a frequency allocation, is printed in normal characters (example: MOBILE except aeronautical mobile).

3.4 The footnotes indicated in a box in the Table of Frequency Allocations, without the prefix “IND”, refer to the provisions of the Radio Regulations and are called International Footnotes. The footnotes, with prefix IND, are specific to India and appear in column 4 of the Table of Frequency Allocations.

3.5 In the cells, under the column heading “India”, only those international footnotes are listed which apply to frequency allocations in India.

3.6 The word Resolution, followed by a number and some additional text in parenthesis (example: Resolution **339 (Rev.WRC-07)**) refer to a Resolution in the Radio Regulations and the World Radiocommunication Conference which revised or adopted the Resolution.

3.7 For a radiocommunication service in the Table of Frequency Allocations, which is not qualified by an India footnote, the provisions of the Radio Regulations apply. For a radiocommunication service in the Table of Frequency Allocations, which is qualified by an India footnote(s), the provisions of that footnote(s) apply.

Philippines, Kyrgyzstan, the Dem. People's Rep. of Korea, Sudan, Sri Lanka, Thailand and Viet Nam, the allocation to the fixed service in the band 27.9-28.2 GHz may also be used by high altitude platform stations (HAPS) within the territory of these countries. Such use of 300 MHz of the fixed-service allocation by HAPS in the above countries is further limited to operation in the HAPS-to-ground direction and shall not cause harmful interference to, nor claim protection from, other types of fixed-service systems or other co-primary services. Furthermore, the development of these other services shall not be constrained by HAPS. See Resolution **145 (Rev.WRC-12)**. (WRC-12)

5.538 *Additional allocation:* the bands 27.500-27.501 GHz and 29.999-30.000 GHz are also allocated to the fixed-satellite service (space-to-Earth) on a primary basis for the beacon transmissions intended for up-link power control. Such space-to-Earth transmissions shall not exceed an equivalent isotropically radiated power (e.i.r.p.) of +10 dBW in the direction of adjacent satellites on the geostationary-satellite orbit. (WRC-07)

5.539 The band 27.5-30 GHz may be used by the fixed-satellite service (Earth-to-space) for the provision of feeder links for the broadcasting-satellite service.

5.540 *Additional allocation:* the band 27.501-29.999 GHz is also allocated to the fixed-satellite service (space-to-Earth) on a secondary basis for beacon transmissions intended for up-link power control.

5.541 In the band 28.5-30 GHz, the earth exploration-satellite service is limited to the transfer of data between stations and not to the primary collection of information by means of active or passive sensors.

5.541A Feeder links of non-geostationary networks in the mobile-satellite service and geostationary networks in the fixed-satellite service operating in the band 29.1-29.5 GHz (Earth-to-space) shall employ uplink adaptive power control or other methods of fade compensation, such that the earth station transmissions shall be conducted at the power level required to meet the desired link performance while reducing the level of mutual interference between both networks. These methods shall apply to networks for which Appendix 4 coordination information is considered as having been received by the Bureau after 17 May 1996 and until they are changed by a future competent world radiocommunication conference. Administrations submitting Appendix 4 information for coordination before this date are encouraged to utilize these techniques to the extent practicable. (WRC-2000)

People's Rep. of Korea, Somalia, Sudan, South Sudan, Sri Lanka and Chad, the band 29.5-31 GHz is also allocated to the fixed and mobile services on a secondary basis. The power limits specified in Nos. **21.3** and **21.5** shall apply. (WRC-12)

People's Rep. of Korea, Sudan, Sri Lanka, Thailand and Viet Nam, the allocation to the fixed service in the frequency band 31-31.3 GHz may also be used by systems using high altitude platform stations (HAPS) in the ground-to-HAPS direction. The use of the frequency band 31-31.3 GHz by systems using HAPS is limited to the territory of the countries listed above and shall not cause harmful interference to, nor claim protection from, other types of fixed-service systems, systems in the mobile service and systems operated under No. **5.545**. Furthermore, the development of these services shall not be constrained by HAPS. Systems using HAPS in the frequency band 31-31.3 GHz shall not cause harmful interference to the radio astronomy service having a primary allocation in the frequency band 31.3-31.8 GHz, taking into account the protection criterion as given in the most recent version of Recommendation ITU-R RA.769. In order to ensure the protection of satellite passive services, the level of unwanted power density into a HAPS ground station antenna in the frequency band 31.3-31.8 GHz shall be limited to -106 dB(W/MHz) under clear-sky conditions, and may be increased up to -100 dB(W/MHz) under rainy conditions to mitigate fading due to rain, provided the effective impact on the passive satellite does not exceed the impact under clear-sky conditions.
